iPECS WIT-400HE WIFI Handset

Due to changes in WIFI technology we now recommend that the WIT-400HE handset is only used in single access point WIFI configurations.

This product is now only supported in small office and home office environments that use a single WIFI access point.

Although we have many successful multi access point implementations of this product we are seeing increasing problems working with the latest WIFI networks.

iPECS WIT-400HE Alternatives:

- iPECS GDC 800 IP DECT
- iPECS GDC 400 TDM DECT
- 3rd party SIP handset providers
- SIM Free mobile handset with UCS Mobile app

Ericsson-LG are currently investigating possible alternative solutions for multi-AP environments, Pragma will confirm as soon as any new options become available.

If you have any questions, please contact your Account Manager or Business Development Manager.
